

Start off by clicking on **Get Started**:

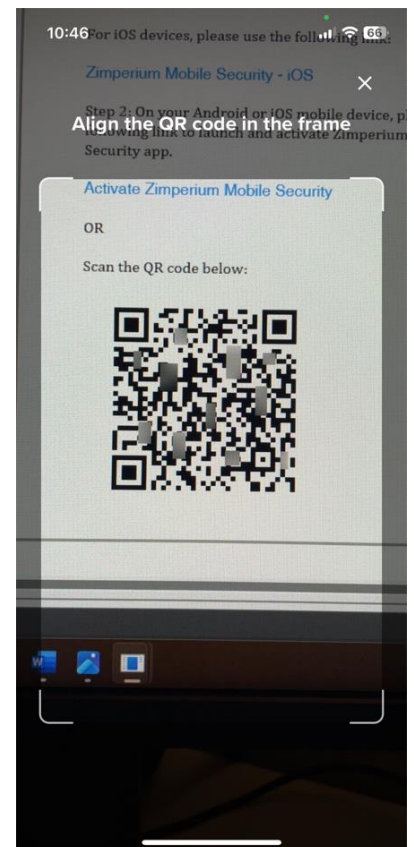

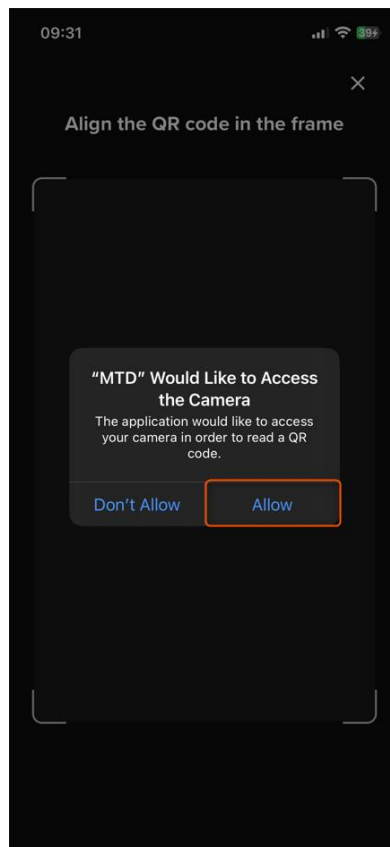

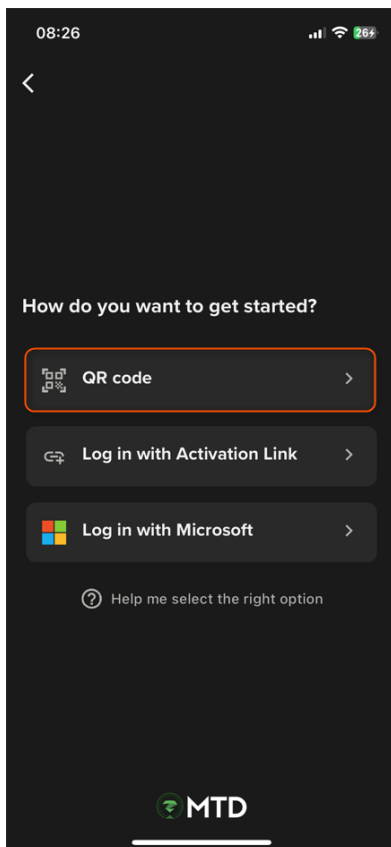

Now the Zimperium-service needs to be activated and you can do it through two different methods.

**-Scan the QR-code in the activation mail** (This method require you to open the activation mail on a second device to scan the QR-code with the camera on your phone)

**-Click the activation link in the activation mail** (Use this method if you don't have access to secondary device)

These images show how to activate the service through scanning the QR-code:

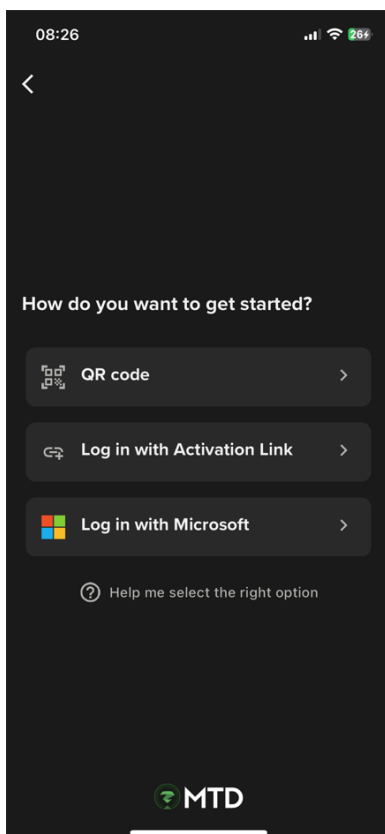

These images show how to activate the service through the activation link in the activation mail.

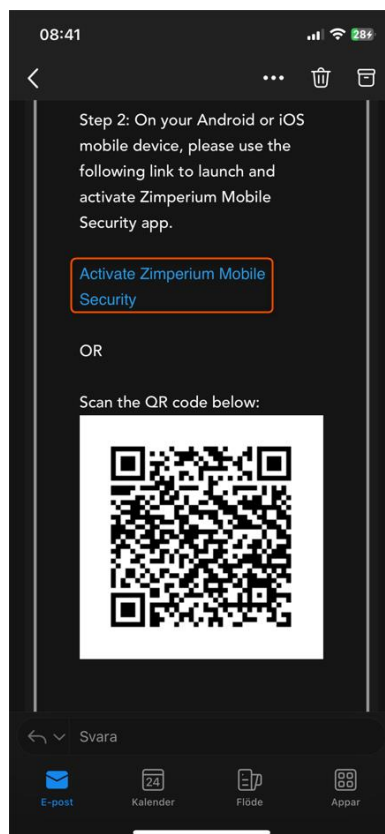

Start by opening the app (you don't need to click on **Log in with Activation Link**)

After you've opened the app, go back to the activation mail, click on **Activate Zimperium Mobile Security**, and then click **Open** on the next page that opens

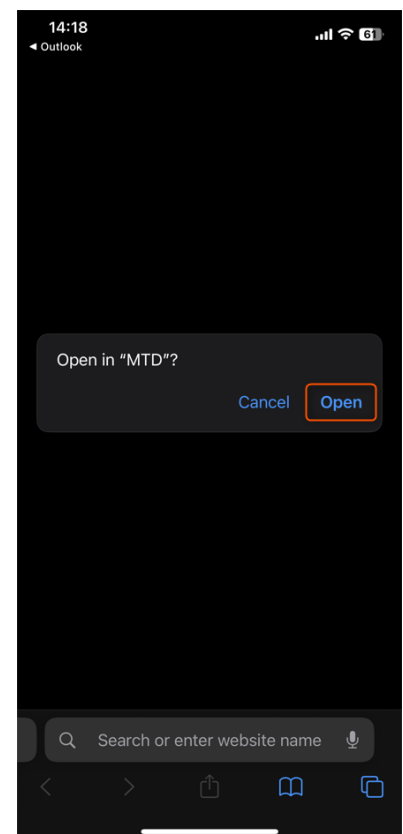

1:

3:

After the service has been activated, this page will show. It tells you what type of information the app won't collect and what information it will have access to and might collect.

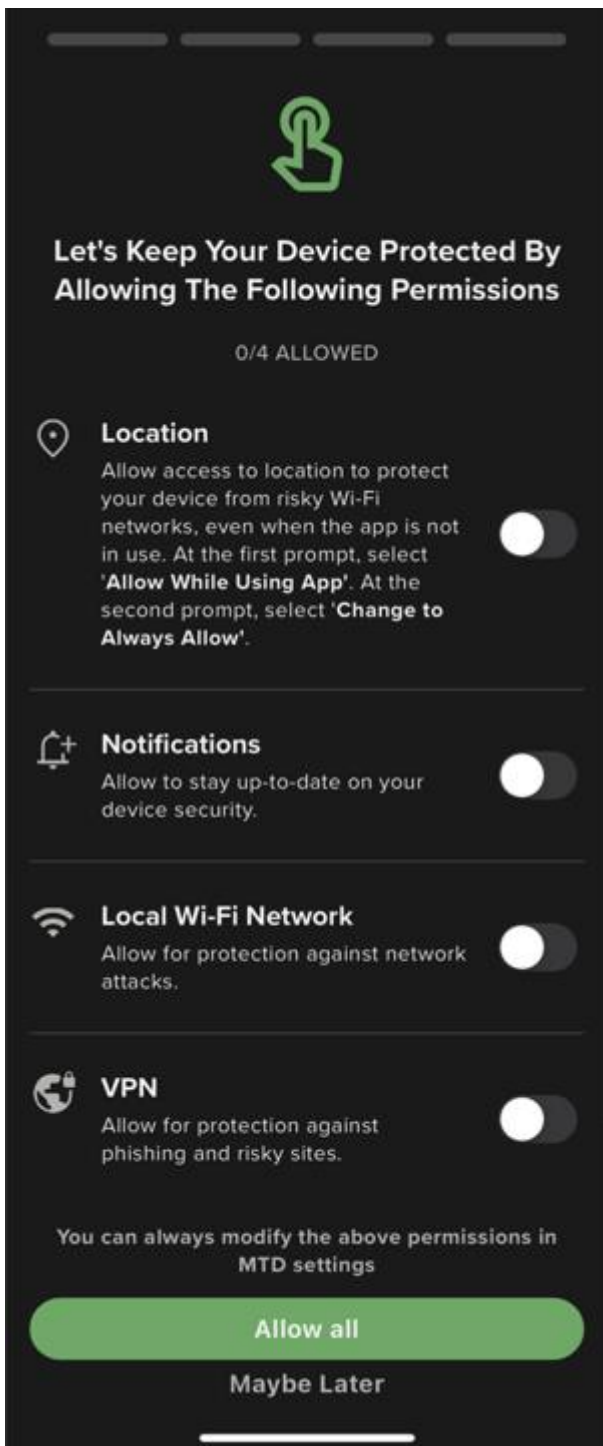

Click on **Continue** to get to the next page:

After the page of information the app may collect, it will ask for your permission to get access to different features on your phone in order to work properly.

You can change these permissions later on through settings in the app if you wish to. We'll explain how you give the app access for these permissions and why it's necessary.

Note: More access means a safer phone, if you don't grant the app full access it won't deliver at its full potential.

## Location

This permission is required for the app to scan the local network for threats and if the network you're connected to has been used in a prior cyber-attack.

*This permission is optional.*

Check this box if you want to grant the app permission to this feature:

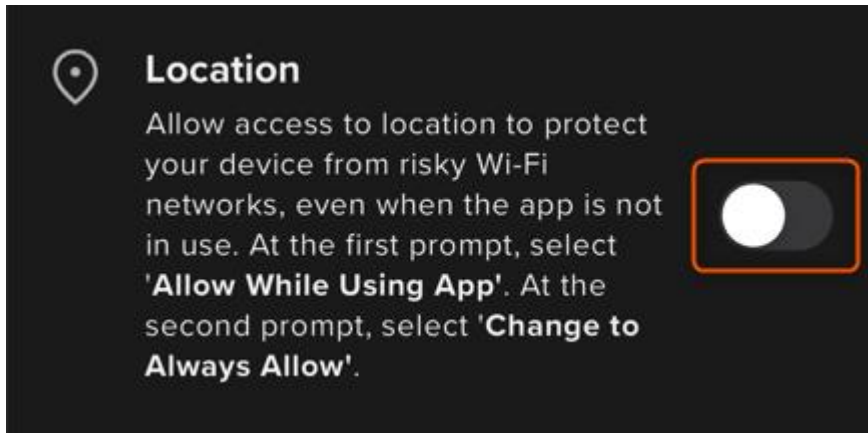

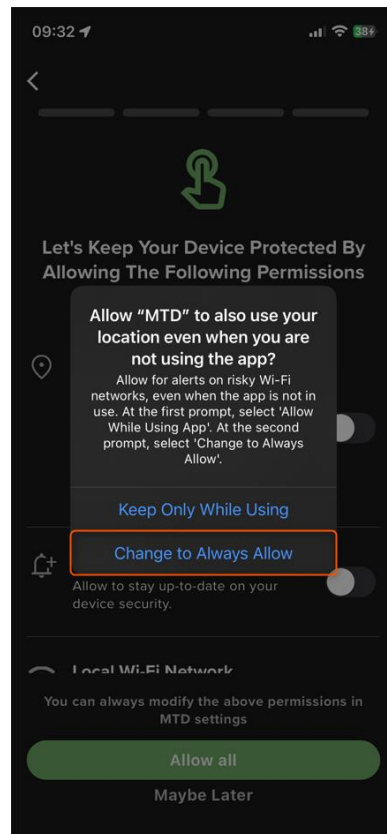

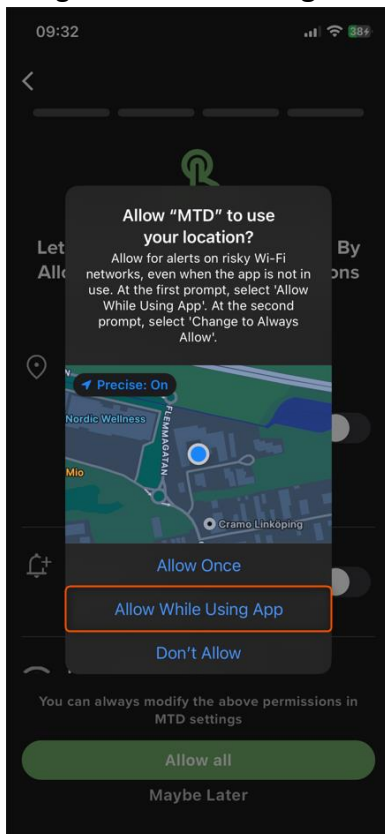

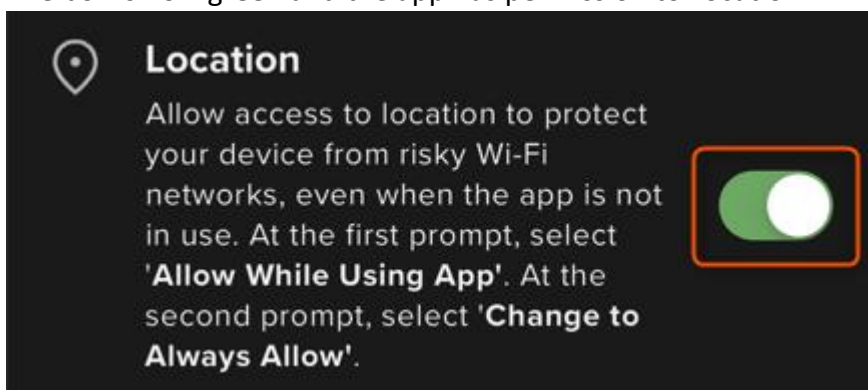

Image 1: Click on **Allow While Using App**

Image 2: Click on **Change to Always Allow**

The box is now green and the app has permission to Location:

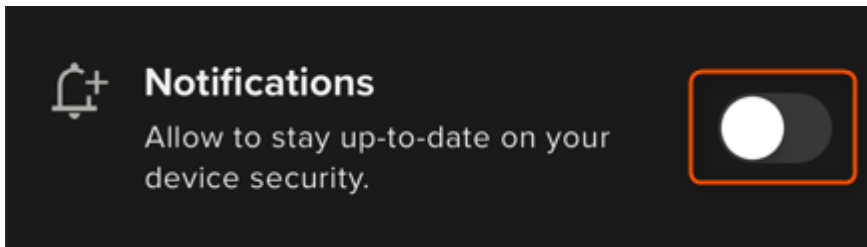

## Notifications

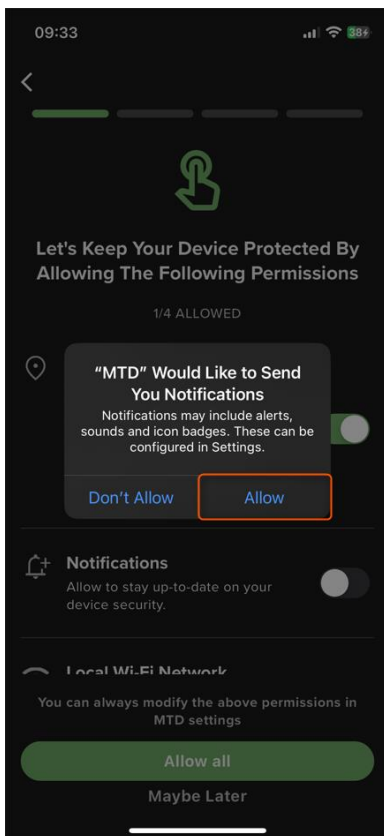

This permission is required for the app to be able to send you notifications.

*This permission is NOT optional.*

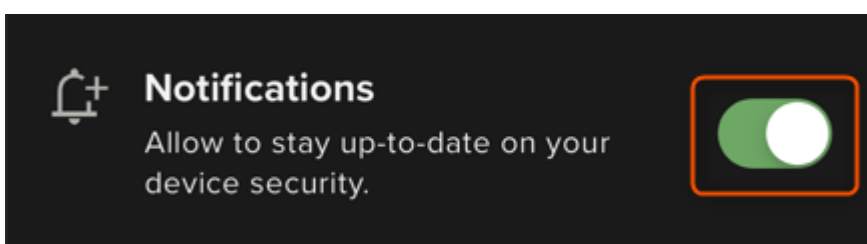

Check this box if you want to grant the app permission to this feature:

Click on **Allow**:

The box is now green and the app has permission to Notifications:

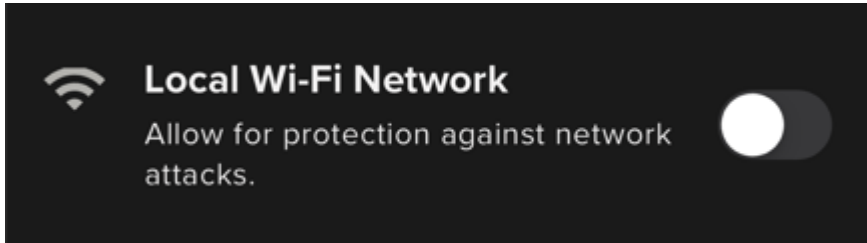

## Local Wi-Fi Network

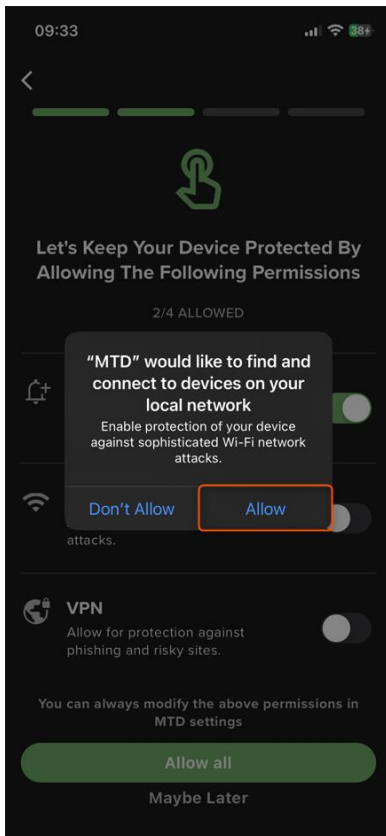

This permission is required for the app to be able to protect your device from cyber-attacks over wireless networks (Wi-Fi)

Denna behörighet är obligatorisk.

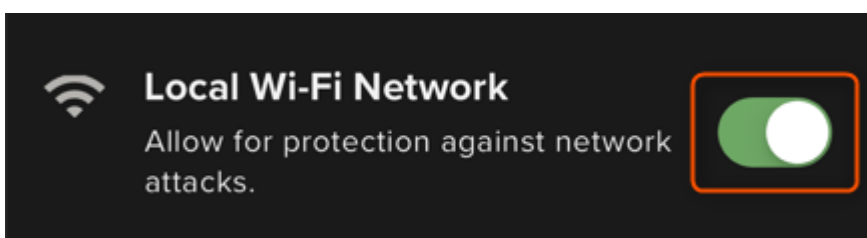

Check this box if you want to grant the app permission to this feature:

Click on **Allow**:

Nu ska rutan vara grön och appen har nu fått behörighet till Local Wi-Fi Network (Lokalt Wi-Fi nätverk):

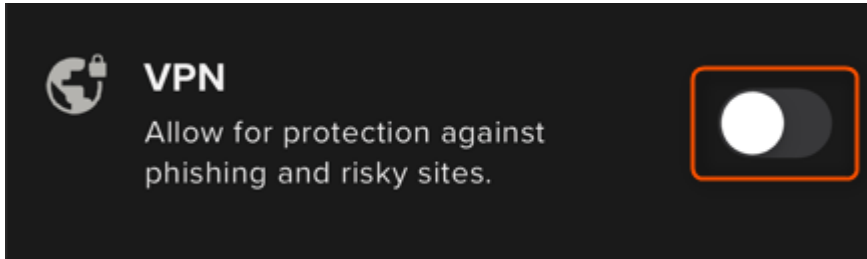

## VPN

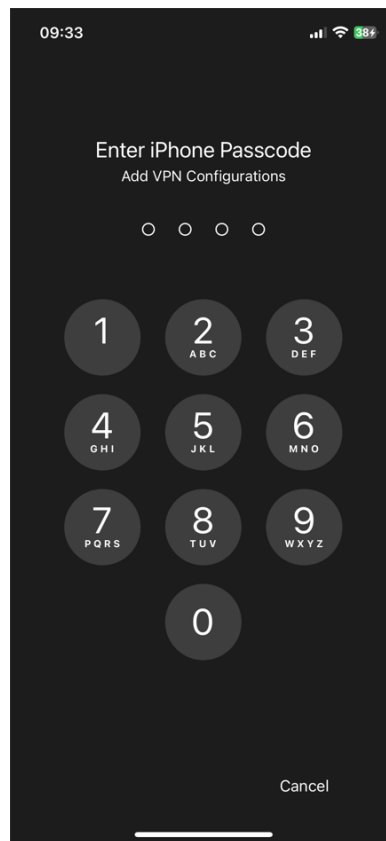

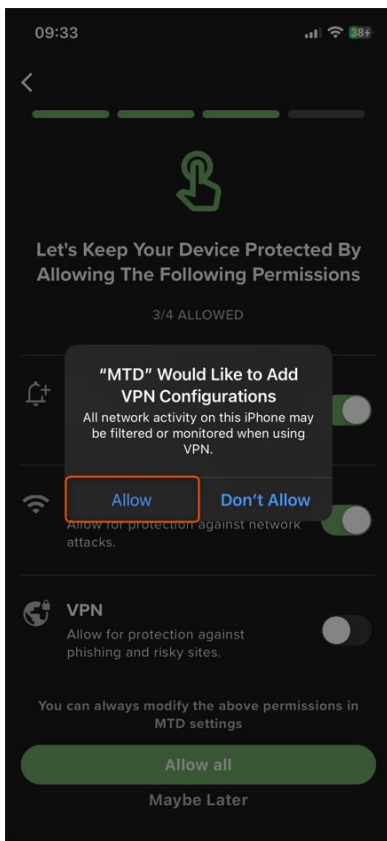

This permission is required for the app to detect malicious links that you've received over mail and prevents you from visiting unsafe websites.

*This permission is NOT optional.*

Check this box if you want to grant the app permission to this feature:

Click on **Allow** and then enter your iPhone passcode:

The box is now green and the app has permission to VPN:
